Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.                                          |

# Synthetic Common Application

APPLICANT APP-007 | SOURCE RECORD 22

## 5. FBLA

Participation: grades 10-12; 3 hours/week; 34 weeks/year

Placed 1st at districts 5 times for 5 events and 9th at state in 1 event. As part of FBLA, the applicant participated in weekly planning, completed assigned responsibilities, documented progress, and helped resolve unexpected problems. Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.

## 6. Work

Participation: grades 9-11; 8 hours/week; 37 weeks/year

15 hours per week at a fast food joint for two years. As part of Work, the applicant participated in weekly planning, completed assigned responsibilities, documented progress, and helped resolve unexpected problems. Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.

## 7. Model UN

Participation: grades 10-12; 2 hours/week; 32 weeks/year

As part of Model UN, the applicant participated in weekly planning, completed assigned responsibilities, documented progress, and helped resolve unexpected problems. Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.

## PERSONAL ESSAY

Prompt: Reflect on an experience that contributed to personal growth or changed your understanding.

The first sign that I needed a better plan was the page of crossed-out notes in front of me. I was working through an opportunity to explain a difficult idea to someone encountering it for the first time, and each new idea seemed to create two more questions. My instinct was to keep moving and hope the direction would become obvious. Instead, I stopped, wrote the goal in one sentence, and listed what the group could actually verify. That small decision changed the project and, more importantly, changed the way I approach unfamiliar work.

I began separating assumptions from evidence. I asked each person to explain what they thought the assignment required, then combined the answers into a checklist. Some ideas were useful, some overlapped, and some had to be set aside. The process was slower at first, but it gave everyone a clear place to contribute. By the end of the meeting, the uncertainty had not disappeared; it had become organized enough for us to act.

That experience followed me into Band. I started paying attention to the work that happens before a visible result: preparing materials, confirming responsibilities, noticing who has not spoken, and checking whether a plan still makes sense after conditions change. I learned that leadership is not always the person with the quickest answer. Often it is the person willing to make the problem understandable and help others decide what to do next.

I also learned to become less protective of my first attempt. Earlier in high school, I sometimes treated revision as evidence that I had done something wrong. Gradually, I began to see feedback as information. A comment from a teacher could reveal a weak connection. A question from a teammate could show that my explanation made sense only to me. Revision became less about correcting a failure and more about making an idea usable by someone else.

This is one reason I am drawn to Biomedical Engineering. I enjoy the moment when scattered details begin to form a pattern, but I am equally interested in what happens after that pattern is found. Information matters when it helps someone understand a choice, improve a process, or ask a better question. I want to develop the technical and analytical foundation to do that work responsibly, while continuing to strengthen the communication skills that make the work useful.

The habits I value now are simple: define the question, document the process, invite another perspective, and be willing to change direction when the evidence requires it. These habits have helped me in classes, activities, and

# Synthetic Common Application

---

conversations where there was no obvious first step. They have also made me more patient with uncertainty. I no longer expect every worthwhile problem to arrive with complete instructions.

In college, I hope to contribute to teams where people bring different strengths and where ideas improve through discussion. I will bring preparation, curiosity, and a willingness to complete the less visible work that keeps a project moving. I also expect to be challenged. I want classmates and professors to identify gaps in my reasoning, introduce methods I have not considered, and push me to explain my conclusions more clearly.

The crossed-out page from that first project was not a record of wasted effort. It showed the questions that eventually led to a stronger result. The lesson I carry forward is that progress does not require certainty at the beginning. It requires enough patience to examine the problem, enough humility to revise, and enough commitment to continue. That is the approach I hope to bring to the study of Biomedical Engineering and to the broader Riverview State community.

APPLICANT APP-007 | SOURCE RECORD 22

## UNIVERSITY-SPECIFIC WRITING

### Prompt 1: Why do you want to study Biomedical Engineering at Riverview State University?

I want to study Biomedical Engineering because it brings together the questions I most enjoy: how information can be examined carefully, how competing explanations can be tested, and how a conclusion can be communicated to people who need to act on it. My classes have given me an introduction to these habits, while my work in Band has shown me why they matter outside a classroom.

At Riverview State University, I would look for foundational coursework in Biomedical Engineering, opportunities to apply concepts through projects, and classes that require students to explain the reasoning behind their work. I am especially interested in learning how professionals recognize incomplete evidence, document assumptions, and make responsible recommendations. Those skills would help me move from informal problem-solving toward a more rigorous understanding of the field.

I would also bring a collaborative approach. I tend to organize open questions, document next steps, and ask for feedback before a project is finished. I hope to contribute those habits to group assignments and student organizations while learning from classmates who approach problems differently.

### Prompt 2: How would you contribute to the Riverview State community?

The experience I would bring to the Riverview State community is my involvement in Band. It taught me that participation becomes meaningful when people can depend on one another for both visible and routine responsibilities. Preparing materials, following up after meetings, and helping someone understand the next step can matter as much as leading the final presentation.

On campus, I would seek organizations connected to service, academic interests, and peer mentoring. I would be comfortable beginning as a learner, taking responsibility for a defined task, and gradually contributing more as I understand the group. I am interested in communities that value thoughtful preparation and make room for members with different levels of experience.

I hope my contribution would be measured not only by the events I attend, but by whether the people working with me feel supported and whether the group becomes better organized over time. That is the kind of campus involvement that would help me grow while also being useful to others.
