SUBMISSION RECORD

Application ID	APP-004
Application cycle	2017
Submitted	October 15, 2016
Receiving institution	Riverview State University
Admission plan	Regular Decision
Intended major	Neuroscience
Source record	1030
Processing designation	Storage, compliance, and human review only

APPLICANT INFORMATION

Applicant name	Applicant APP-004
Permanent residence	California
Applicant email	app-004@synthetic.example
Applicant telephone	Not retained in research dataset
Citizenship information	Not retained in research dataset

Synthetic Common Application

APPLICANT APP-004 | SOURCE RECORD 1030

EDUCATION

Secondary school	Pacific Crest Public High School
School profile ID	HS-002
School type	Large Public
Expected graduation year	2017
School report	Submitted as a separate supporting document
Transcript	Submitted separately when present

ACADEMIC HISTORY

Cumulative unweighted GPA	3.85
Cumulative weighted GPA	Not provided
Class rank	Not reported
AP courses reported	5
IB courses reported	0
Honors courses reported	0

TESTING

SAT	1560
ACT	Not reported
AP coursework/testing notes	Math 2; Chemistry; USH; Biology
Official score reports	Stored as separate supporting documents when supplied

HONORS AND DISTINCTIONS

Synthetic Common Application

APPLICANT APP-004 | SOURCE RECORD 1030

1	1st Award at Regional Science Fair Reported by the applicant.
2	Honorable Mention at State Science Fair Reported by the applicant.
3	Siemens Semifinalist Reported by the applicant.
4	Regeneron STS Scholar/Semifinalist Reported by the applicant.
5	Upcoming publications Reported by the applicant.

ACTIVITIES

1. Research internship Participation: grades 11-12; 2 hours/week; 37 weeks/year Presented research in science fairs and paper competitions, including Siemens and Regeneron. As part of Research internship, the applicant defined small project questions, documented procedures, tested possible solutions, and presented findings to peers. The work reinforced an interest in Neuroscience by connecting careful analysis with practical decision-making.
2. Martial Arts Participation: grades 9-12; 6 hours/week; 29 weeks/year Won 3rd place and finalist at team and solo events. As part of Martial Arts, the applicant practiced consistently, revised work after critique, contributed original ideas, and helped prepare material for public presentation. The activity developed creative discipline and an appreciation for how individual preparation supports a collective result.
3. DECA Participation: grades 9-11; 3 hours/week; 38 weeks/year As part of DECA, the applicant participated in weekly planning, completed assigned responsibilities, documented progress, and helped resolve unexpected problems. Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.

4. Officer of local program

Participation: grades 9-12; 5 hours/week; 29 weeks/year

Conducts experiments at nearby schools to promote STEM. As part of Officer of local program, the applicant participated in weekly planning, completed assigned responsibilities, documented progress, and helped resolve unexpected problems. Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.

5. Internship at local hospital

Participation: grades 9-11; 4 hours/week; 31 weeks/year

As part of Internship at local hospital, the applicant participated in weekly planning, completed assigned responsibilities, documented progress, and helped resolve unexpected problems. Over time, the applicant became more comfortable taking initiative while also asking for feedback when expectations were unclear.

RECOMMENDATIONS AND SCHOOL FORMS

Recommendation 1	Science Teacher - confidential supporting document received separately
Recommendation 2	School Counselor - confidential supporting document received separately
Counselor/school report	Maintained as a separate supporting record when supplied
Applicant access	Confidential recommendations are not reproduced in this applicant PDF

PERSONAL ESSAY

Prompt: Reflect on an experience that contributed to personal growth or changed your understanding.

The first sign that I needed a better plan was the page of crossed-out notes in front of me. I was working through a creative activity that improved only after practice was treated as a repeatable process, and each new idea seemed to create two more questions. My instinct was to keep moving and hope the direction would become obvious. Instead, I stopped, wrote the goal in one sentence, and listed what the group could actually verify. That small decision changed the project and, more importantly, changed the way I approach unfamiliar work.

I began separating assumptions from evidence. I asked each person to explain what they thought the assignment required, then combined the answers into a checklist. Some ideas were useful, some overlapped, and some had to be set aside. The process was slower at first, but it gave everyone a clear place to contribute. By the end of the meeting, the uncertainty had not disappeared; it had become organized enough for us to act.

That experience followed me into Research internship. I started paying attention to the work that happens before a visible result: preparing materials, confirming responsibilities, noticing who has not spoken, and checking whether a plan still makes sense after conditions change. I learned that leadership is not always the person with the quickest answer. Often it is the person willing to make the problem understandable and help others decide what to do next.

I also learned to become less protective of my first attempt. Earlier in high school, I sometimes treated revision as evidence that I had done something wrong. Gradually, I began to see feedback as information. A comment from a teacher could reveal a weak connection. A question from a teammate could show that my explanation made sense only to me. Revision became less about correcting a failure and more about making an idea usable by someone else.

This is one reason I am drawn to Neuroscience. I enjoy the moment when scattered details begin to form a pattern, but I am equally interested in what happens after that pattern is found. Information matters when it helps someone understand a choice, improve a process, or ask a better question. I want to develop the technical and analytical foundation to do that work responsibly, while continuing to strengthen the communication skills that make the work useful.

The habits I value now are simple: define the question, document the process, invite another perspective, and be willing to change direction when the evidence requires it. These habits have helped me in classes, activities, and

conversations where there was no obvious first step. They have also made me more patient with uncertainty. I no longer expect every worthwhile problem to arrive with complete instructions.

In college, I hope to contribute to teams where people bring different strengths and where ideas improve through discussion. I will bring preparation, curiosity, and a willingness to complete the less visible work that keeps a project moving. I also expect to be challenged. I want classmates and professors to identify gaps in my reasoning, introduce methods I have not considered, and push me to explain my conclusions more clearly.

The crossed-out page from that first project was not a record of wasted effort. It showed the questions that eventually led to a stronger result. The lesson I carry forward is that progress does not require certainty at the beginning. It requires enough patience to examine the problem, enough humility to revise, and enough commitment to continue. That is the approach I hope to bring to the study of Neuroscience and to the broader Riverview State community.

UNIVERSITY-SPECIFIC WRITING

Prompt 1: Why do you want to study Neuroscience at Riverview State University?

I want to study Neuroscience because it brings together the questions I most enjoy: how information can be examined carefully, how competing explanations can be tested, and how a conclusion can be communicated to people who need to act on it. My classes have given me an introduction to these habits, while my work in Research internship has shown me why they matter outside a classroom.

At Riverview State University, I would look for foundational coursework in Neuroscience, opportunities to apply concepts through projects, and classes that require students to explain the reasoning behind their work. I am especially interested in learning how professionals recognize incomplete evidence, document assumptions, and make responsible recommendations. Those skills would help me move from informal problem-solving toward a more rigorous understanding of the field.

I would also bring a collaborative approach. I tend to organize open questions, document next steps, and ask for feedback before a project is finished. I hope to contribute those habits to group assignments and student organizations while learning from classmates who approach problems differently.

Prompt 2: How would you contribute to the Riverview State community?

The experience I would bring to the Riverview State community is my involvement in Research internship. It taught me that participation becomes meaningful when people can depend on one another for both visible and routine responsibilities. Preparing materials, following up after meetings, and helping someone understand the next step can matter as much as leading the final presentation.

On campus, I would seek organizations connected to service, academic interests, and peer mentoring. I would be comfortable beginning as a learner, taking responsibility for a defined task, and gradually contributing more as I understand the group. I am interested in communities that value thoughtful preparation and make room for members with different levels of experience.

I hope my contribution would be measured not only by the events I attend, but by whether the people working with me feel supported and whether the group becomes better organized over time. That is the kind of campus involvement that would help me grow while also being useful to others.
