SUPPLEMENTAL RESPONSE 1

Prompt: Why do you want to study Aerospace, Mechanical Engineering at Riverview State University?

I want to study Aerospace, Mechanical Engineering because it brings together the questions I most enjoy: how information can be examined carefully, how competing explanations can be tested, and how a conclusion can be communicated to people who need to act on it. My classes have given me an introduction to these habits, while my work in Robotics Team has shown me why they matter outside a classroom.

At Riverview State University, I would look for foundational coursework in Aerospace, Mechanical Engineering, opportunities to apply concepts through projects, and classes that require students to explain the reasoning behind their work. I am especially interested in learning how professionals recognize incomplete evidence, document assumptions, and make responsible recommendations. Those skills would help me move from informal problem-solving toward a more rigorous understanding of the field.

I would also bring a collaborative approach. I tend to organize open questions, document next steps, and ask for feedback before a project is finished. I hope to contribute those habits to group assignments and student organizations while learning from classmates who approach problems differently.

SUPPLEMENTAL RESPONSE 2

Prompt: How would you contribute to the Riverview State community?

The experience I would bring to the Riverview State community is my involvement in Robotics Team. It taught me that participation becomes meaningful when people can depend on one another for both visible and routine responsibilities. Preparing materials, following up after meetings, and helping someone understand the next step can matter as much as leading the final presentation.

On campus, I would seek organizations connected to service, academic interests, and peer mentoring. I would be comfortable beginning as a learner, taking responsibility for a defined task, and gradually contributing more as I understand the group. I am interested in communities that value thoughtful preparation and make room for members with different levels of experience.

I hope my contribution would be measured not only by the events I attend, but by whether the people working with me feel supported and whether the group becomes better organized over time. That is the kind of campus involvement that would help me grow while also being useful to others.
